

AN INVITATION FROM ALIGN LIMITED

...to a unique **Space Syntax** breakfast presentation by world renowned expert in urban planning and spatial layout from the UK, Tim Stonor.

The continued development of Auckland should be achieved in a people-focussed manner, built on evidence and facts and centred around economic success. Join us on **Monday the 30th of September from 8.00 am to 9.00 am** to hear Tim present a scientific approach to the measurement of urban network efficiency, showing how street patterns can be analysed and optimised.

Using examples from the UK, China and the USA as well as discussing the Auckland situation, Tim will describe the urban planning challenges facing cities today and will argue that these can be addressed through the considered design of street networks.

Tim Stonor is an architect and urban planner who has devoted his career to the analysis and design of human behaviour patterns – the ways in which people move, interact and transact in buildings and urban places. He is an internationally recognised expert in the design of spatial layouts and, in particular, the role of space in the generation of social, economic and environmental value. Tim is also a Visiting Professor at University College London.

This presentation will be of interest to landscape designers, urban planners, transport planners, master planners, architects & architectural designers, investors, developers and those in education & local government.

Date: 30th September 2013

Time: 8.00 am – 9.00 am

Venue: AUT University (City Campus)
Building WG Room 308
